

On January 24th, 2008 Juniper announced its plan to phase out the Juniper DX product line. Radware, a recent member of Juniper's J-Partner Enterprise Solution Alliance program is now working with Juniper and its partners to address customer migration requirements regarding new or replacement application delivery solutions. Radware's award-winning AppDirector application delivery controller, now available in an on-demand, software scalable platform, is a perfect substitute for Juniper customers that need to future-proof their ongoing local and global load balancing needs. In addition, both companies have conducted extensive interoperability and scalability testing with Radware's solutions and Juniper's Secure Access and Unified Access Control products to ensure that customers can maintain the integrity of their integrated infrastructures.

For more information regarding pricing, discounts, ordering, support, and related details of the migration program, please contact: JuniperPartnership@radware.com.
