# Safe Harbor

This presentation includes "forward-looking statements" within the meaning of the Private Securities Litigation Reform Act of 1995. Any statements made herein that are not statements of historical fact, including statements about Radware's plans, outlook, beliefs, or opinions, are forward-looking statements. Generally, forward-looking statements may be identified by words such as "believes," "expects," "anticipates," "intends," "estimates," "plans," and similar expressions or future or conditional verbs such as "will," "should," "would," "may," and "could." Because such statements deal with future events, they are subject to various risks and uncertainties, and actual results, expressed or implied by such forward-looking statements, could differ materially from Radware's current forecasts and estimates. Factors that could cause or contribute to such differences include, but are not limited to: the impact of global economic conditions, including as a result of the state of war declared in Israel in October 2023 and instability in the Middle East, the war in Ukraine, tensions between China and Taiwan, financial and credit market fluctuations (including elevated interest rates), impacts from tariffs or other trade restrictions, inflation, and the potential for regional or global recessions; our dependence on independent distributors to sell our products; our ability to manage our anticipated growth effectively; our business may be affected by sanctions, export controls, and similar measures, targeting Russia and other countries and territories, as well as other responses to Russia's military conflict in Ukraine, including indefinite suspension of operations in Russia and dealings with Russian entities by many multi-national businesses across a variety of industries; the ability of vendors to provide our hardware platforms and components for the manufacture of our products; our ability to attract, train, and retain highly qualified personnel; intense competition in the market for cybersecurity and application delivery solutions and in our industry in general, and changes in the competitive landscape; our ability to develop new solutions and enhance existing solutions; the impact to our reputation and business in the event of real or perceived shortcomings, defects, or vulnerabilities in our solutions, if our end-users experience security breaches, or if our information technology systems and data, or those of our service providers and other contractors, are compromised by cyber-attackers or other malicious actors or by a critical system failure; our use of AI technologies that present regulatory, litigation, and reputational risks; risks related to the fact that our products must interoperate with operating systems, software applications and hardware that are developed by others; outages, interruptions, or delays in hosting services; the risks associated with our global operations, such as difficulties and costs of staffing and managing foreign operations, compliance costs arising from host country laws or regulations, partial or total expropriation, export duties and quotas, local tax exposure, economic or political instability, including as a result of insurrection, war, natural disasters, and major environmental, climate, or public health concerns; our net losses in the past and the possibility that we may incur losses in the future; a slowdown in the growth of the cybersecurity and application delivery solutions market or in the development of the market for our cloud-based solutions; long sales cycles for our solutions; risks and uncertainties relating to acquisitions or other investments; risks associated with doing business in countries with a history of corruption or with foreign governments; changes in foreign currency exchange rates; risks associated with undetected defects or errors in our products; our ability to protect our proprietary technology; intellectual property infringement claims made by third parties; laws, regulations, and industry standards affecting our business; compliance with open source and third-party licenses; complications with the design or implementation of our new enterprise resource planning ("ERP") system; our reliance on information technology systems; our ESG disclosures and initiatives; and other factors and risks over which we may have little or no control. This list is intended to identify only certain of the principal factors that could cause actual results to differ. For a more detailed description of the risks and uncertainties affecting Radware, refer to Radware's Annual Report on Form 20-F, filed with the Securities and Exchange Commission (SEC), and the other risk factors discussed from time to time by Radware in reports filed with, or furnished to, the SEC. Forward-looking statements speak only as of the date on which they are made and, except as required by applicable law, Radware undertakes no commitment to revise or update any forward-looking statement in order to reflect events or circumstances after the date any such statement is made. Radware's public filings are available from the SEC's website at [www.sec.gov](http://www.sec.gov) or may be obtained on Radware's website at [www.radware.com](http://www.radware.com).

## Building the Radware Growth Engine

Connie Stack, Chief Growth Officer  
Investor Day | February 2026

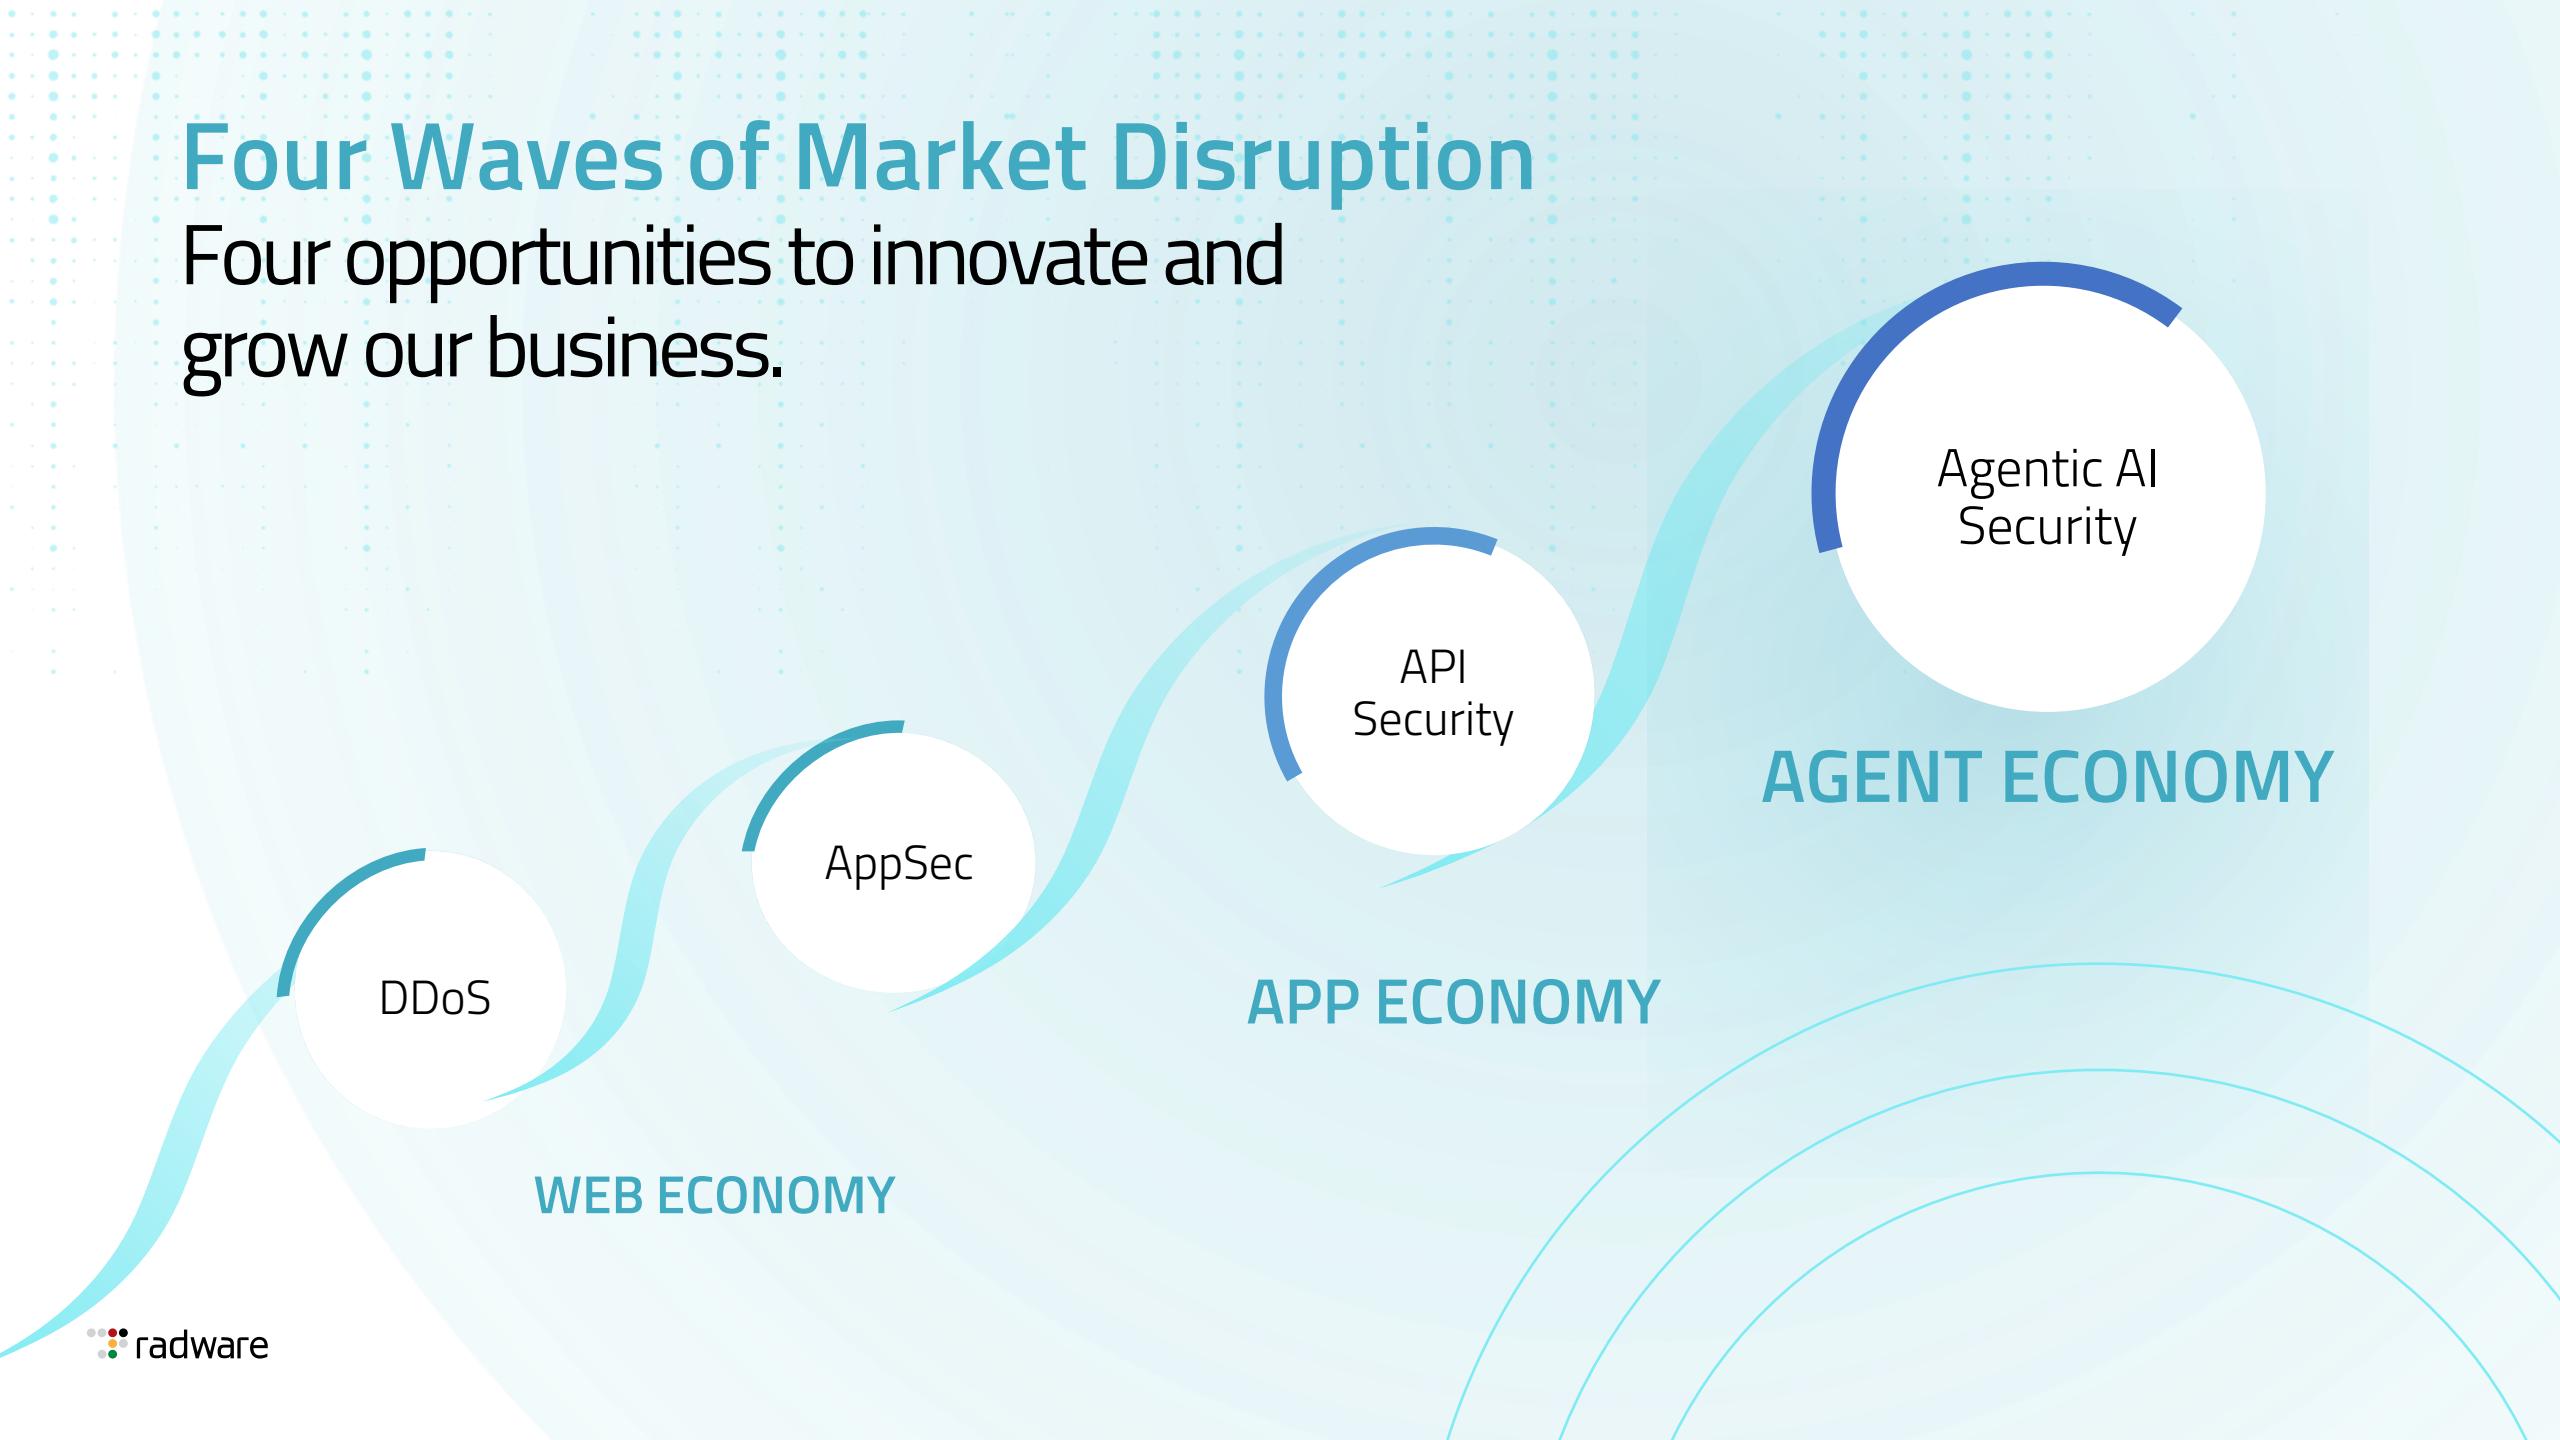

# My Role

As **Chief Growth Officer**, I partner with the CEO and Executive Leadership to architect and execute Radware's global growth strategy. I drive ARR maximization through a high-impact blend of inorganic and organic product innovation, specifically positioning the firm as a leader in API security and the emergent AI security categories.

By also leading the global Marketing and Sales Development organizations, I unify our innovation roadmap with aggressive go-to-market strategies to meet or exceed growth targets.

# Four Waves of Market Disruption

Four opportunities to innovate and grow our business.

Joined January 2026

# Market Penetration Radware's Game Changing Cloud Platform

From reactive defense to proactive protection:  
deep reasoning with unmatched speed and precision

- • •  
**Proactive behavioral defense**

detect and neutralize threats in real time

- • •  
**Anti-fragile system**

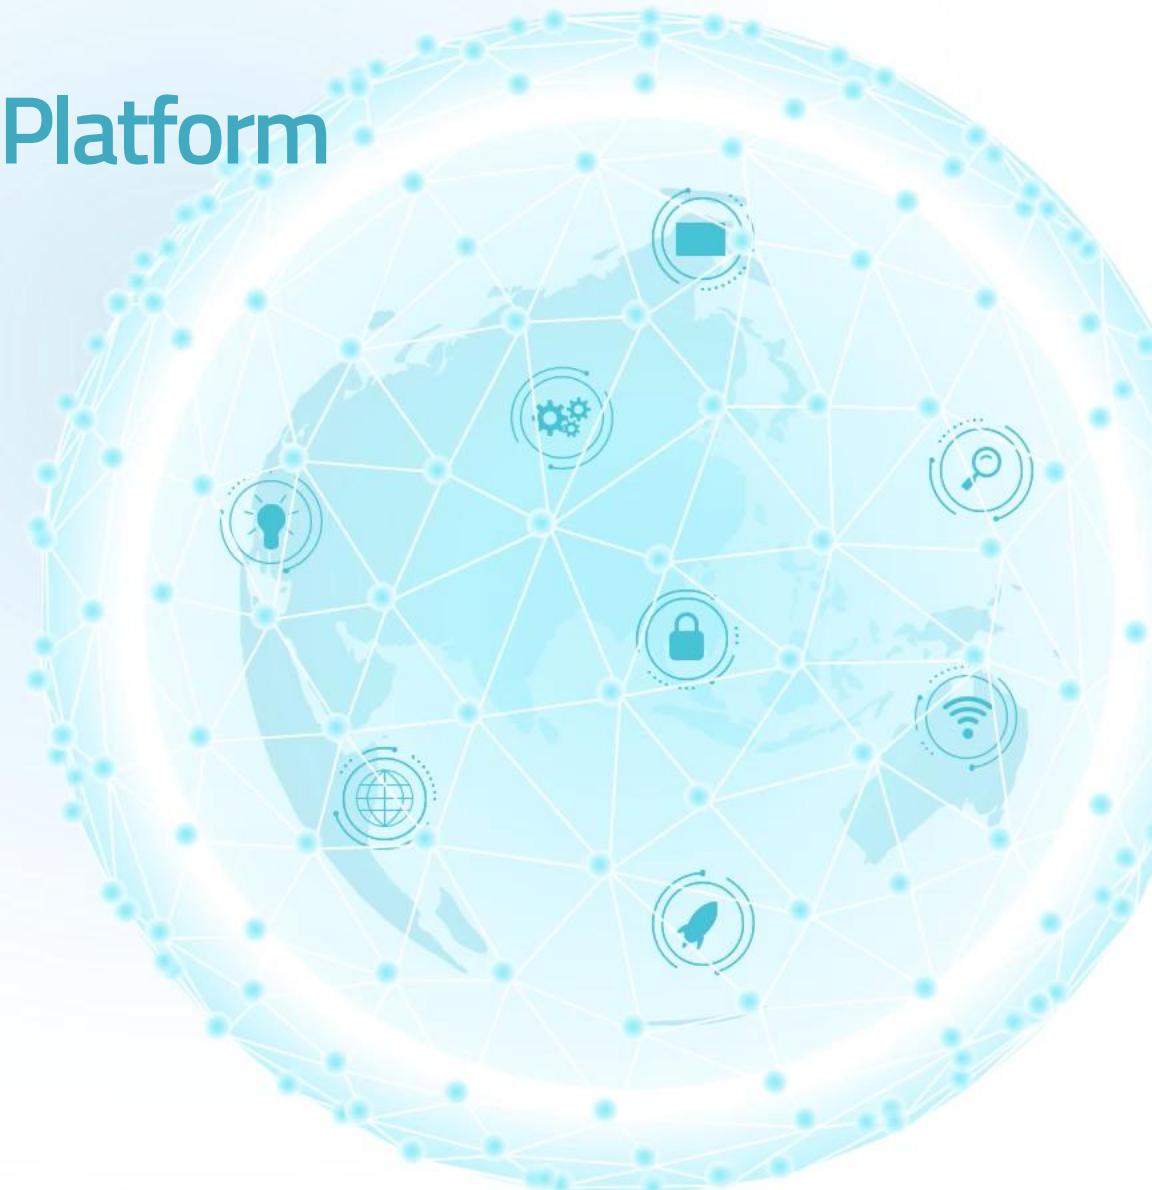

Learns and improves from every attack.  
Trained over years.

- • •  
**Predictive: built to expect the unexpected**

Unlock threats and anomalies via similarity modeling and embeddings

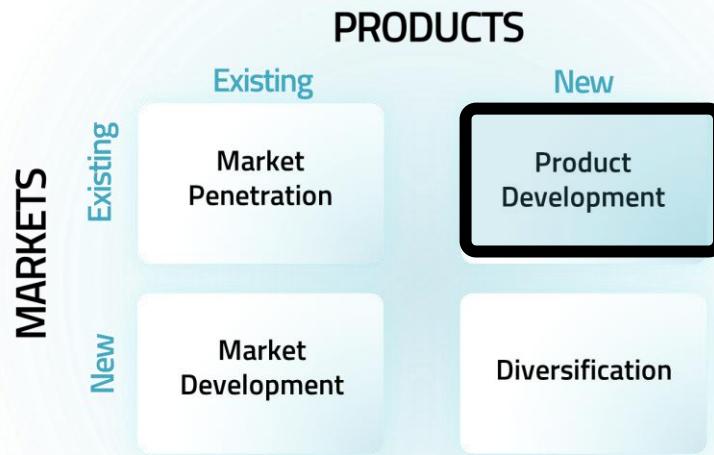

- • •  
**Covering all enforcement points**

network, application, and API across cloud and on-prem

# Product Development

## Existing Markets, New Products

- In 2025 Radware made significant investments in new feature development, all fully integrated into the Radware Cloud Platform:
  - ✓ Radware API Security
  - ✓ Radware EPIC AI
  - ✓ Radware AI Soc-X
  - ✓ Radware AI Doc-X

# Product Development

## Layering AI & API into Radware's Cloud Platform

Unlocking more capability and protection for our customers

### API Security

Complete solution from API testing to runtime security.

### AI Soc-X

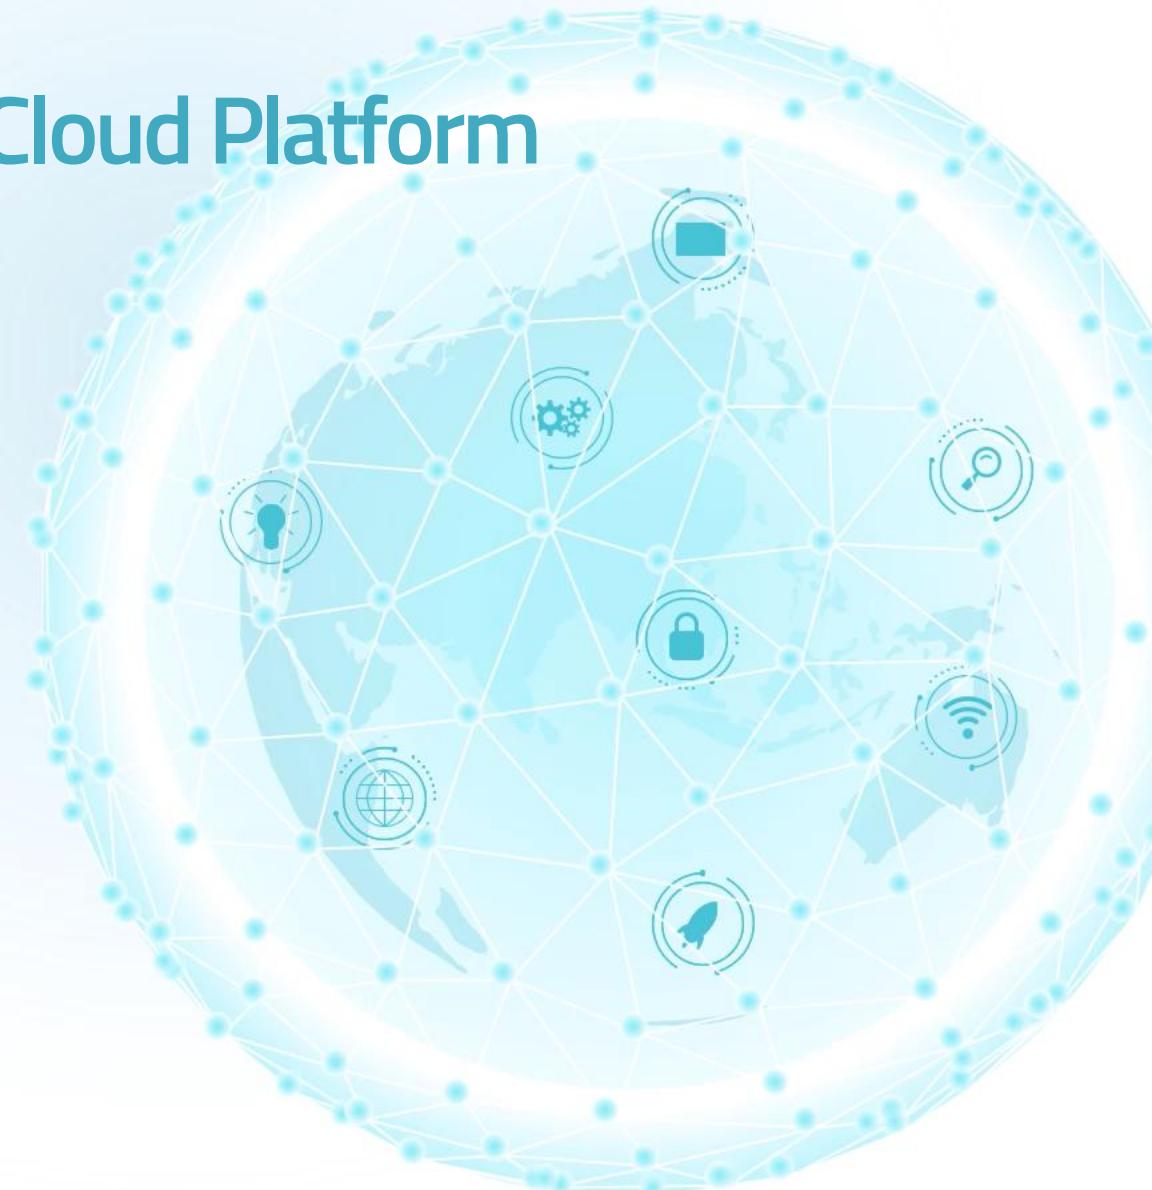

A co-pilot for SOC analysts to drive down MTTR

### EPIC-AI

Embedded, cross-platform AI to accelerate threats detection & mitigation

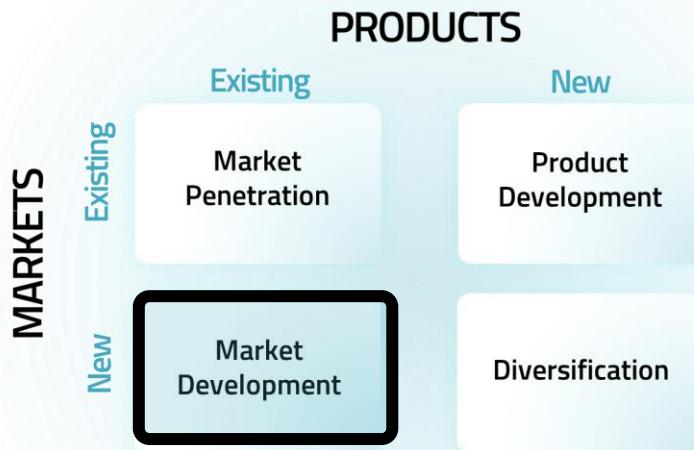

### AI Doc-X

An natural language optimization engine for Radware solution configuration.

# Market Development

## New Markets, Existing Products

- Expanding OEM contribution from Cisco and Checkpoint
- Radware has successfully penetrated the MSSP market and will further scale this market in 2026 with innovative features and new pricing & licensing models.

OpenAI Fixed ChatGPT Security Flaw That Put Gmail Data at Risk

A ChatGPT artificial intelligence mobile phone app. (Photographer: Andrey Rudakov/Bloomberg)

By Marcin Maziarski September 18, 2025 at 10:00 AM EDT

OpenAI patched a ChatGPT security flaw that could have allowed hackers to extract Gmail data from users and corporate Gmail accounts at cyber firm Radware.

The flaw was found in ChatGPT's Dialog Research Agent, a tool designed to facilitate to help users analyze large tranches of moderation. The vulnerability could have enabled attackers to siphon sensitive data from corporate or personal Gmail accounts, according to the findings.

Once again bypassing the guards! This time taking over the agent itself (Persistent attack)!

By Marla Aufmuth

September 18, 2025 at 10:00 AM EDT

OpenAI patched a ChatGPT security flaw that could have allowed hackers to extract Gmail data from millions of corporate and personal accounts at cyber firm Radware.

The flaw was found in ChatGPT's Dialog Research agent, a tool designed in February to help users analyze large tranches of text. The vulnerability could have enabled attackers to siphon sensitive data from corporate or personal Gmail accounts, according to the findings.

Once again bypassing the guards! This time taking over the agent itself (Persistent attack)!

Pre-built marketing campaign kits

The screenshot displays the Radware Partner Enablement portal. The interface is organized into several sections:

- Training and Enablement:** Includes "Partner Academy", "Newsletter Archive", "Webinar VOD Center", and "Competitive Resources".
- Prospecting and Selling:** Includes "Sales Tools", "Sales Programs", "Demo Labs", "Tech Resources", and "Marketing Resources".
- Partner Programs Assets:** Includes "Channel Partners", "MSSP and SP Partners" (which is highlighted with a yellow box), "OEM Resources", "Partner Rewards", and "Special Promotions".
- Footer:** Includes links for "Glossary", "Legal Notices", "Privacy Policy", "Terms of Use", and "Site Feedback".

At the bottom of the portal, a footer note reads: "© Radware Ltd. 2024. All Rights Reserved."

# Benefits to MSSP

1

## New Revenue Stream

Deliver industry leading DDoS and AppSec protection services

Add new revenue from existing customer base

2

## Lower Risk

No CAPEX required  
Fully managed by Radware  
White-labeled for your brand  
Reduced risk Vs. DIY

3

## Monetize Immediately

No buildout delay: Live in weeks  
MSSP enablement program  
Per-app /per-link pricing = competitive end-user pricing, high margins

# Case Study: Bell Cyber February News Release

"Attackers are moving faster and using increasingly automated techniques to evade detection," said **John Menezes, president, Bell Cyber**. "By expanding our partnership with Radware, we're providing organizations across Canada and throughout North America a simpler, AI-driven service that helps them detect and respond to threats quicker with the confidence of Bell's fully managed, Canadian-delivered expertise."

# Case Study: US Tier 1 Provider

2025 Growth – higher than expected!
