MTBF Declaration

Dear customer,

Radware's products based on HW Model **ODS-EL1,** in Ambient Temperature **25°C** have MTBF (Mean Time Between Failures) as follow:

- Minimum **197,090 hrs.**

MTBF calculation is based on:

- The simulation of key components to have the estimated value

- Calculation formula:

$$\lambda = \sum_{i=1}^{n} \lambda_i \qquad MTBF = \frac{1}{\lambda}$$

Where: λ_i = failure rate of the item

       n   = number of items.
