

The Restriction Of certain Hazardous Substances (RoHS) directive compelled Radware to redesign its products in order to comply with the directive.

Ensuring that Radware products comply with the RoHS directive requires that components and materials within Radware products do not contain the banned hazardous substances. In complying with the RoHS directive 2002/95/EC all of Radware's products are included in point 7 of the annex. Radware Ltd. therefore is not obligated to remove Lead from its products. Radware Ltd. is obligated to eliminate substances 2-6 in the below table to levels below the acceptable thresholds from all products.

	Substance	Acceptable Threshold
1	Lead	1,000ppm
2	Cadmium	100ppm
3	Mercury	1,000ppm
4	Hexavalent Chromium	1,000ppm
5	PBB	1,000ppm
6	PBDE	1,000ppm

Radware will go above and beyond the requirements of the RoHS directive and eliminate all 6 of the banned substances whenever possible.

This is known as RoHS 6, and will be adhered to when technologically and logistically possible.

The CT100 product is RoHS compliant since September 15th 2006.
