

## MTBF Declaration

**Dear customer,**

Radware's products based on HW Model **ODS2**, in Ambient Temperature **25°C** have MTBF (Mean Time Between Failures) as follow:

- Security Products - minimum **36,833 hrs.**
- ADC Products - minimum **41,291 hrs.**

MTBF calculation is based on:

- The simulation of key components to have the estimated value
- Calculation formula:

$$\lambda = \sum_{i=1}^n \lambda_i \quad MTBF = \frac{1}{\lambda}$$

Where:  $\lambda_i$  = failure rate of the item  
n = number of items.
