

The [Restriction Of certain Hazardous Substances](#) (RoHS) directive compelled Radware to redesign its products in order to comply with the directive.

Ensuring that Radware products comply with the [RoHS](#) directive requires that components and materials within Radware products do not contain the banned hazardous substances. In complying with the RoHS directive 2002/95/EC all of Radware's products are included in point 7 of the annex. Radware Ltd. therefore is not obligated to remove Lead from its products. Radware Ltd. is obligated to eliminate substances 2-6 in the below table to levels below the acceptable thresholds from all products.

	Substance	Acceptable Threshold
1	Lead	1,000ppm
2	Cadmium	100ppm
3	Mercury	1,000ppm
4	Hexavalent Chromium	1,000ppm
5	PBB	1,000ppm
6	PBDE	1,000ppm

Radware will go above and beyond the requirements of the RoHS directive and eliminate all 6 of the banned substances whenever possible.

This is known as RoHS 6, and will be adhered to when technologically and logistically possible.

The ODS3-XL product has been RoHS compliant since its development in September of 2010.
