

**Dear customer,**

Radware's products based on HW Model **ODS-HT2** (Alteon 7220, Alteon 7612, Alteon 7100, Alteon 7700, DefensePro X40, DefensePro X80), in Ambient Temperature **25°C** have MTBF (Mean Time Between Failures) as follow:

- Minimum **95,085 hrs.**

MTBF calculation is based on prediction standard Telcordia SR-332 Issue 4:

- The simulation of key components to have the estimated value
- Calculation formula:

$$\lambda_{SS} = \pi_E \sum_{i=1}^n N_i \lambda_{SS_i} \quad \text{MTBF} = 1 / \lambda_{ss}$$

Where:  $\lambda_{ss}$  = failure rate of the item

n = number of items.

$\pi_E$  =environment factor
